

Seasonally Adjusted Regional Employment Statistics for California

Created by Beacon Economics

www.BeaconEcon.com

August 2007 Release

California has a very large economy, with many highly diverse regional economies. Unfortunately, the regional data are not seasonally adjusted by state agencies. In the absence of seasonal adjustment, analysts typically compare job levels and growth rates with those of the previous year to abstract from seasonal influences. This practice provides a relevant perspective on how regional economic growth has developed over the past year, but it says little or nothing about how regional growth has progressed in recent months.

To address those deficiencies in the local data, Beacon Economics publishes seasonally adjusted versions of employment data for a number of major metropolitan economies within California. On the third Friday of each month, when the unadjusted regional data are released by the Employment Development Department (EDD), our economists compile seasonally adjusted versions of the major components of payroll employment, aggregate employment within both the household and payroll surveys, and unemployment rates. We publish a summary table of our seasonally adjusted employment data for each of the covered metropolitan regions, along with summary charts.

For more information on this release, or to speak with one of our economists regarding the implications of the current statistics, please contact Beacon Economics.

For Southern California, Central Coast and Southern Central Valley Regions

Explanation of the Data

There are two sources of data—payroll figures come from a monthly survey of employers called the Current Employment Statistics survey (CES), and unemployment and household employment figures come from the Current Population Survey (CPS). The payroll numbers primarily reflect those workers who are covered by unemployment insurance. The data do not include those workers who are self-employed or employed on an informal basis. The numbers are subject to revision during subsequent months as well as at the beginning of the following year when the new benchmark is released. The current data are benchmarked to 2005 figures. Due to the benchmark process, data released toward the end of the year are less reliable and more subject to substantial revisions.

The sample sizes for the unemployment and household figures from the CPS are considerably smaller within the state and are also subject to annual revisions. The unemployment rate, however, tends to be fairly stable due to the methodologies employed.

Our aggregate California seasonally adjusted figures will differ from the seasonally adjusted release of data from the EDD. This is because we use a different algorithm. In order to more clearly reveal trends, we also smooth the data by removing random jumps in the data that often occur on a month-to-month basis. All data is reported in terms of thousands of workers. Growth rates are reported in annualized terms.

Each table includes the following information for the regional economy:

1. Current employment total.
2. Current month's growth in employment in absolute terms.
3. Last month's growth in employment in absolute terms.
4. Last month's growth in employment in absolute terms from the previous month's data release, so revisions to the previous month's data may be noted.
5. Quarterly (3 month average) growth in employment in absolute and annualized percentage terms
6. Previous quarters growth in employment in absolute and annualized percentage terms
7. Year-to-date employment growth in annualized percentage terms.
8. Previous year's year-to-date employment growth in annualized percentage terms.
