

Seasonally Adjusted Regional Employment Statistics for California

Created by Beacon Economics

www.BeaconEcon.com

February 2007 Release

California has a very large economy, with many highly diverse regional economies. Unfortunately, the regional data are not seasonally adjusted by state agencies. In the absence of seasonal adjustment, analysts typically compare job levels and growth rates with those of the previous year to abstract from seasonal influences. This practice provides a relevant perspective on how regional economic growth has developed over the past year, but it says little or nothing about how regional growth has progressed in recent months.

To address those deficiencies in the local data, Beacon Economics publishes seasonally adjusted versions of employment data for a number of major metropolitan economies within California. On the third Friday of each month, when the unadjusted regional data are released by the Employment Development Department (EDD), our economists compile seasonally adjusted versions of the major components of payroll employment, aggregate employment within both the household and payroll surveys, and unemployment rates. We publish a summary table of our seasonally adjusted employment data for each of the covered metropolitan regions, along with summary charts.

For more information on this release, or to speak with one of our economists regarding the implications of the current statistics, please contact Beacon Economics.

For Southern California, Central Coast and Southern Central Valley Regions

Overview

California added 14,000 jobs in February on a seasonally adjusted basis, up from an upwardly adjusted 10,200 in January. This puts growth for the last quarter at a tepid 1.3% annualized rate, below the 2% seen in the previous month and below where the economy was in 2006 at this point in the year. Surprisingly job gains were led by Construction. However, it is worth noting that the sector has not increased materially from where it was last year at this time. Trade, Professional Services, and Education and Healthcare all also showed strong signs of growth. Finance and manufacturing saw slower growth. Unemployment remained steady at 4.8%.

Regionally, the greatest slowdown in job creation occurred along the Southern Californian coast. San Diego has lost jobs on net over the past quarter while Orange County has remained flat. Los Angeles continues to expand at a slow pace. The Inland Empire continued to see strong growth however. San Jose and the Bay area showed continuing recovery while Sacramento and other parts of the central valley also showed solid signs of growth.

Given the substantial upward revisions in payroll seen over the last few years it is worth asking whether this relative slow growth is real or just reflecting the bias in the employment survey. The key here is to understand that most of the issues with the bias occur later in the year as the benchmark ages. Last year's survey got off track in April, as can be seen in the employment chart shown below. Clearly this is not the issue in the current data. However, California felt a similar slump in job growth in early 2006 before growth took off in the second quarter. Given economic signs of a slowdown, with many leading indicators showing a slowdown in the economy over the next two quarters, it seems unlikely at this point in time that we will experience a similar bounce.

State Employment Overview

Explanation of the Data

There are two sources of data—payroll figures come from a monthly survey of employers called the Current Employment Statistics survey (CES), and unemployment and household employment figures come from the Current Population Survey (CPS). The payroll numbers primarily reflect those workers who are covered by unemployment insurance. The data do not include those workers who are self-employed or employed on an informal basis. The numbers are subject to revision during subsequent months as well as at the beginning of the following year when the new benchmark is released. The current data are benchmarked to 2005 figures. Due to the benchmark process, data released toward the end of the year are less reliable and more subject to substantial revisions.

The sample sizes for the unemployment and household figures from the CPS are considerably smaller within the state and are also subject to annual revisions. The unemployment rate, however, tends to be fairly stable due to the methodologies employed.

Our aggregate California seasonally adjusted figures will differ from the seasonally adjusted release of data from the EDD. This is because we use a different algorithm. In order to more clearly reveal trends, we also smooth the data by removing random jumps in the data that often occur on a month-to-month basis. All data is reported in terms of thousands of workers. Growth rates are reported in annualized terms.

Each table includes the following information for the regional economy:

1. Current employment total.
2. Current month's growth in employment in absolute terms.
3. Last month's growth in employment in absolute terms.
4. Last month's growth in employment in absolute terms from the previous month's data release, so revisions to the previous month's data may be noted.
5. Quarterly (3 month average) growth in employment in absolute and annualized percentage terms
6. Previous quarters growth in employment in absolute and annualized percentage terms
7. Year-to-date employment growth in annualized percentage terms.
8. Previous year's year-to-date employment growth in annualized percentage terms.
