

Seasonally Adjusted Regional Employment Statistics for California

Created by *Beacon Economics*

www.BeaconEcon.com

October 2007 Release

Overview

The good news is that estimates for state employment were revised up for September. The bad news is that all these new jobs and more were lost in October. The state saw a decline of 14,000 nonfarm payroll jobs September to October of this year, the first negative reading seen in some time. The losses were concentrated in two sectors, construction and information, and around the state Los Angeles was hit the worst with 11,000 losses, again concentrated in the Information sector. Information is a sector that includes the motion picture industry, but the strike currently underway in the area occurred after the October data was collected—so this is not the reason for the losses.

It is true that the payroll survey is currently based on an aging benchmark and it is likely that some of these losses, particular in the Information sector, may be reversed when the revised data are released in February of next year. However the general loss of jobs in sectors related to real estate, construction, finance and trade, along with the nearly full percentage point increase in the unemployment rate is plenty of evidence that the California job market is definitely weakening. This is bad news for the state budget gap and the already beleaguered housing industry. We expect that labor markets will continue to exhibit weakness into 2008.

To address those deficiencies in the local data, Beacon Economics publishes seasonally adjusted versions of employment data for a number of major metropolitan economies within California. On the third Friday of each month, when the unadjusted regional data are released by the Employment Development Department (EDD), our economists compile seasonally adjusted versions of the major components of payroll employment, aggregate employment within both the household and payroll surveys, and unemployment rates. We publish a summary table of our seasonally adjusted employment data for each of the covered metropolitan regions, along with summary charts.

For more information on this release, or to speak with one of our economists regarding the implications of the current statistics, please contact Beacon Economics.

For Southern California, Central Coast and Southern Central Valley Regions

Explanation of the Data

There are two sources of data—payroll figures come from a monthly survey of employers called the Current Employment Statistics survey (CES), and unemployment and household employment figures come from the Current Population Survey (CPS). The payroll numbers primarily reflect those workers who are covered by unemployment insurance. The data do not include those workers who are self-employed or employed on an informal basis. The numbers are subject to revision during subsequent months as well as at the beginning of the following year when the new benchmark is released. The current data are benchmarked to 2005 figures. Due to the benchmark process, data released toward the end of the year are less reliable and more subject to substantial revisions.

The sample sizes for the unemployment and household figures from the CPS are considerably smaller within the state and are also subject to annual revisions. The unemployment rate, however, tends to be fairly stable due to the methodologies employed.

Our aggregate California seasonally adjusted figures will differ from the seasonally adjusted release of data from the EDD. This is because we use a different algorithm. In order to more clearly reveal trends, we also smooth the data by removing random jumps in the data that often occur on a month-to-month basis. All data is reported in terms of thousands of workers. Growth rates are reported in annualized terms.

Each table includes the following information for the regional economy:

1. Current employment total.
2. Current month's growth in employment in absolute terms.
3. Last month's growth in employment in absolute terms.
4. Last month's growth in employment in absolute terms from the previous month's data release, so revisions to the previous month's data may be noted.
5. Quarterly (3 month average) growth in employment in absolute and annualized percentage terms
6. Previous quarters growth in employment in absolute and annualized percentage terms
7. Year-to-date employment growth in annualized percentage terms.
8. Previous year's year-to-date employment growth in annualized percentage terms.
